Varonis and Salesforce Shield

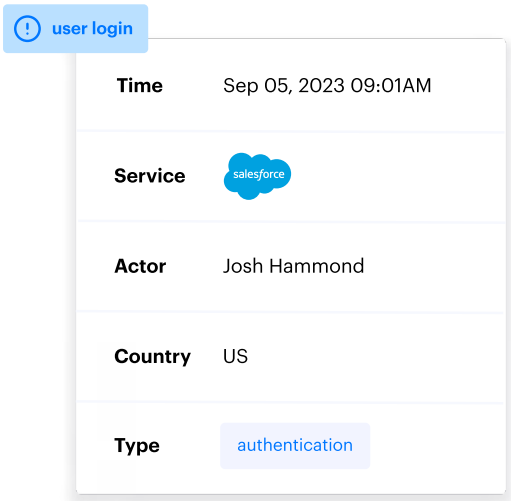
Maximize your Salesforce Shield investment.

Challenge

Salesforce Shield gives organizations unmatched visibility into Salesforce activity, but often requires a Salesforce expert to use it effectively. Shield provides over 40 different event types, but the catch is that each event is presented as raw logs. To get value from the events, you need to not only have knowledge of Apex code to configure alerts, but also be able to manually correlate events together to get a clear picture of what happened in an incident. This skillset – that spans across Salesforce administration and security – can be hard to find. That's where Varonis comes in.

Solution

With Varonis, you can maximize Salesforce Shield by simplifying threat detection and event analysis. Varonis pulls in Shield's activity, generates a human-readable log, and enriches it with additional information and context, such as data sensitivity, user details, and related events. Our ready-made and no-code custom alerts ensure that even a junior security analyst without any Salesforce experience can use Salesforce Shield to its fullest extent.



Key benefits

- Maximize your Salesforce Shield investment.
- Conduct faster investigations with enriched Shield events.
- Detect and catch threats with ready-made alerts.
- Monitor multiple Salesforce Orgs with one interface.
- Visualize and improve your Salesforce security posture.

"If you use Salesforce and you give a damn about security, you need to at least try Varonis. Without it, it's impossible to see all of that data from a holistic perspective in one pane of glass."

Tony Hamil, Senior Cybersecurity Engineer, Top Real Estate Organization

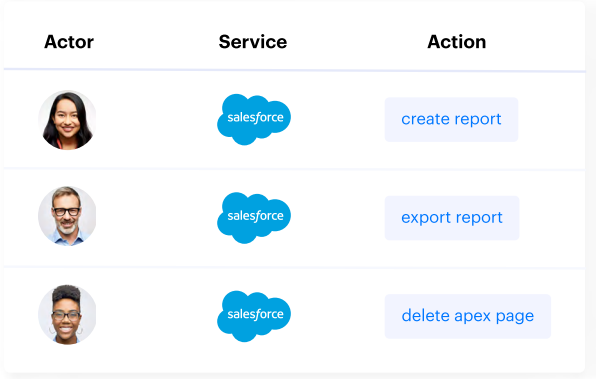
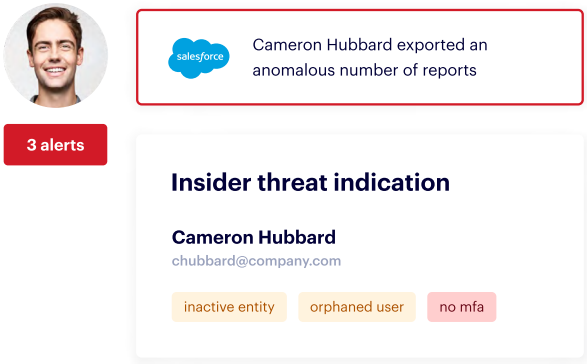
Make Salesforce Shield events more actionable.

Varonis ingests Shield events, including activity related to reports, Aura requests, Lightning interactions, and more. We then enrich each event and present them in a unified and searchable audit trail of events so you can conduct investigations quickly — even across other cloud apps — without the need to manually correlate logs.



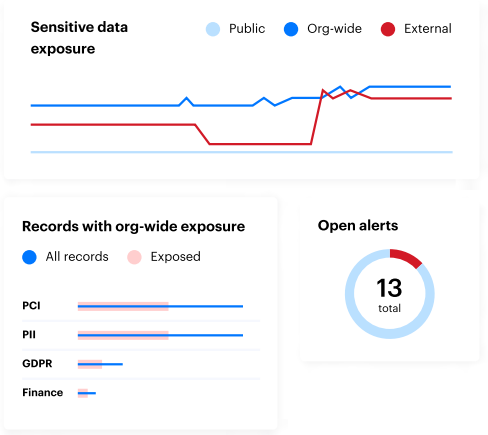


Catch threats with ready-made, no-code alerts.

Varonis comes with ready-made alerts configured by our in-house team of experts to automatically detect suspicious and malicious activity in Salesforce to quickly catch and stop threats in their tracks. Use Varonis to customize alerts to fit your specific needs – all without Apex code.

Improve your Salesforce security posture.

Varonis provides a centralized view of your Salesforce security posture, enabling you to visualize where your environment is exposed to risk and technical debt is building up. Visualize your sensitive data exposure and compliance risk, radically simplify user and permissions management, find and fix critical misconfigurations, reduce third-party app risk, and catch threats – all from a single, unified platform.



Try Varonis for free.

All Varonis products are free to try and come with an engineer-led risk assessment. The easiest way to get started is with a short 1:1 demo and discovery conversation.
