

# DatAlert

Quickly detect and contain threats that traditional security products miss.

## Challenge

Malicious insiders, malware, and advanced persistent threats (APTs) can easily evade perimeter detection and go unnoticed until it's too late. Many security teams can't detect these threats because they can't see what users are doing with data. It takes too long to stitch together disconnected raw logs to figure out who the user is, whether their behavior is normal, and whether the data they touched is important.

## Solution

DatAlert gives you visibility into what's happening with your data so you can quickly detect and contain threats that traditional security products miss. Varonis collects billions of events from multiple data sources, without the use of endpoint agents, and applies machine learning to build behavioral profiles for every user and device. We combine events from disparate data streams, adding unique context to alerts—like file sensitivity and account type—making them more actionable than traditional SIEM alerts. Time to value is days, not months, with hundreds of built-in threat models that uncover suspicious behavior without writing a single correlation rule.

**David Johnson**  
Executive

- Works from **"David's device"**
- US-based** IP address
- Doesn't usually access** customer data

**Person logged in as David Johnson**

- Other user's** device
- Atypical** geolocation
- Accessing **atypical data**

## Key benefits

**88%**

Faster incident investigations<sup>1</sup>

**75%**

Reduced exposure to potential security threats<sup>1</sup>

**4.9/5 stars**

#1 Insider Risk Management Solution on Gartner Peer Insights<sup>2</sup>

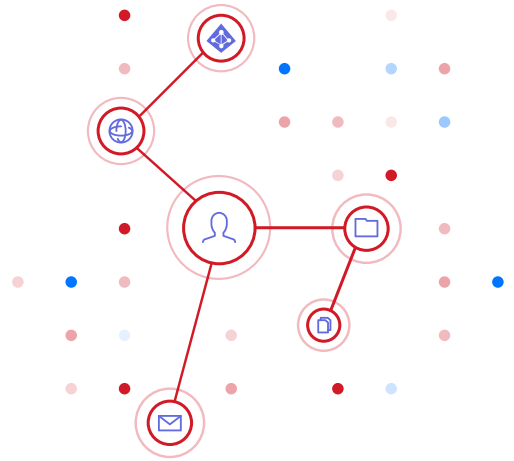

**"Seeing the Incident Response team run those SQL commands and pull the data was awesome. They're very responsive and they figured out where the attack was coming from."**

IT Director, Regional Healthcare Provider

## Catch threats others miss.

Watching your data means attackers can't hide. Varonis combines unique, hard-to-get ingredients to uncover threats as they traverse your network and target your data.

### ! Potential insider threat

account not on watch list

triggered 4 alerts in 7 past days

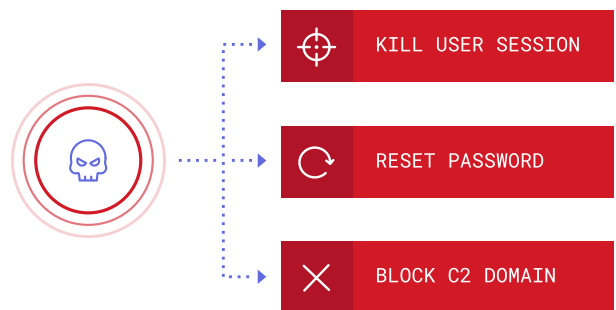

atypical data access activity

## Fewer alerts, more answers.

End the scourge of false positives and endless tuning by replacing threshold-based alerts with machine learning. Our noise-cancelling behavior analytics ensures you'll only get alerts that matter.

## Don't just detect, prevent.

With instant, automated responses, Varonis can perform surgical interventions to stop attacks in their tracks and limit damage.

## Try DatAlert for free.

All Varonis products are free to try and come with an engineer-led risk assessment. The easiest way to get started is with a short 1:1 demo and discovery conversation.
