

# Least Privilege Automation

The most scalable, intelligent way to enforce Zero Trust across your environment

## Challenge

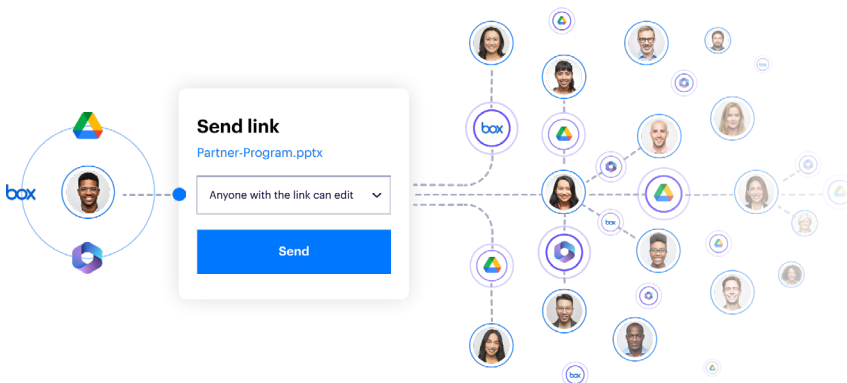

The average organization has **tens of millions** of unique permissions and sharing links exposing critical data. All it takes is one exposed folder, bucket, or API to cause a data-breach crisis.

Even if you could visualize your cloud data exposure, it would take an army of admins years to right-size privileges. And with how quickly new data is created and shared, this work is never-ending.

## Solution

Least privilege automation from Varonis helps organizations safely eliminate excessive permissions for Microsoft 365, Google Drive, and Box. Varonis monitors how data is used and shared, identifies unnecessary or risky pathways to data, and can automatically revoke access at scale.

With flexible configuration options, you can customize remediation policies based on your organization's needs and automate access changes at scale. Interactive dashboards give you a real-time view of your data security posture and allow you to track remediation progress over time.

## Key benefits

Continually eliminate sharing link risk with intelligent, automated remediation.

Customize remediation policies for your organization.

Gain a real-time view of your data security posture with dynamic dashboards.

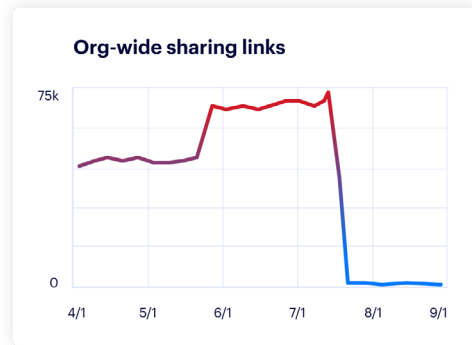

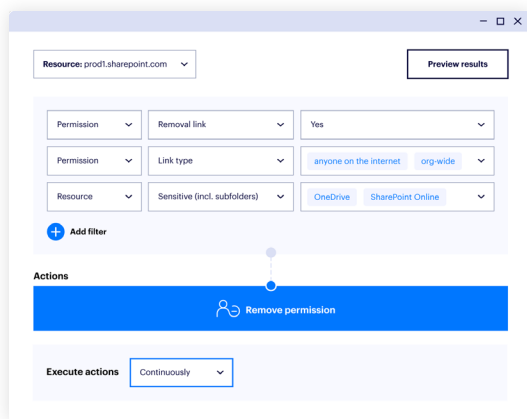

**“I don’t think we could have finished fixing permissions without Varonis. It would have taken years.”**

Security Engineer,  
Regional Healthcare System

## Automated permissions remediation

Varonis makes intelligent decisions about who needs access to data and who doesn't, continually reducing your blast radius without human intervention and without breaking the business.

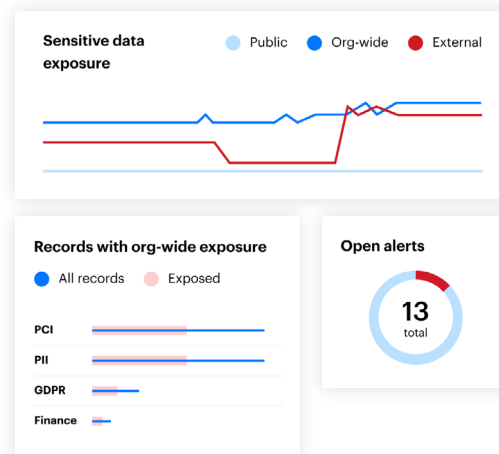

## Customizable remediation policies

Varonis comes with ready-made remediation policies that you can clone and customize for your organization. You define the guardrails, and our automation will do the rest. Customize based on sensitivity, staleness, location, link type, and more.

## Continual risk assessment

Varonis gives you a real-time view of your data security posture by combining sensitivity, access, and activity. From shared links to nested permissions groups, we calculate effective permissions and prioritize remediation based on risk.

## Try Varonis for free.

All Varonis products are free to try and come with an engineer-led risk assessment. The easiest way to get started is with a short 1:1 demo and discovery conversation.
