Closing Security Gaps to Protect Corporate Data: A Study of US and European Organizations Release 3: Differences in Security Practices and Vigilance Across UK, France, Germany and US

Ponemon Institute, October 2016

Part 1. Introduction

Closing Security Gaps to Protect Corporate Data: A Study of US and European Organizations sponsored by Varonis, was conducted to determine the security gaps within organizations that can lead to data breaches and security incidents such as ransomware.

The study surveyed a total of 3,027 employees in US and European organizations (United Kingdom, Germany and France), including 1,371 individuals (hereafter referred to as end users) who work in such areas as sales, finance and accounting, corporate IT, and business operations, and 1,656 individuals who work in IT and IT security (hereafter referred to as IT practitioners). The interviews were conducted in April and May 2016.

Release 1 of the 2016 report, issued August 9, 2016, can be found here. In that report, key findings included a sharp rise in the loss or theft of data, an increase in the percentage of employees with access to sensitive data, and the belief that insider negligence is now the #1 concern for organizations trying to prevent these losses.

Release 2, issued August 30, 2016, was titled "The Widening Gap Between IT and End Users," can be found here. Release 2 highlighted key findings in the examination of IT and end user practices and beliefs.

This report, the third and final release, issued October 3, 2016, is titled "Differences in Security Practices and Vigilance Across UK, France, Germany and US." Release 3 compares responses among the four countries.

All three releases are based on the same interviews and findings documented in the full report. This report includes Key Findings, Methods, and an Appendix with detailed comparisons of responses from end user employees and IT professionals in the US, UK, France, and Germany to a total of 42 questions.

Part 2. Key Findings

Despite the technology available and the continued rise of data loss and theft, it is clear that most organizations are not taking the threat of major disruption in business and reputation seriously enough. Every company relies on – and is entrusted to protect -- valuable, confidential and private data.

The most valuable data featured in most breaches is unstructured data such as emails and documents. This is the data that most organizations have the most of, and know the least about. When emails and files are surfaced publicly, they tend to cause scandal, forcing the breach to have a lasting effect on the company's reputation.

Despite the differences among the four countries in this survey, employees and IT professionals indicate broadly consistent challenges and gaps.

Country-specific highlights:

Fifty percent of German employees say they take all appropriate steps to protect the company data they access and use, compared with 39 percent of UK employees, 37 percent of French employees and 35 percent of US employees.

Forty-four percent of German employees say their organizations strictly enforce policies against the misuse or unauthorized access to company data, well above the responses to the same question in the UK (35 percent), US (32 percent) and France (29 percent).

Thirty-nine percent of IT professionals in Germany say their organizations fully enforce a strict least privilege model (which means access to company data only on a need-to-know basis) for file shares and other collaborative data stores, much higher than the US (29 percent), France (25 percent) and UK (23 percent).

Although German IT pros are least likely to say their organizations have experienced ransomware (12 percent compared with 17 percent in the US, 16 percent in France and 13 percent in the UK), they express the highest levels of concern about the threat of ransomware (83 percent very or extremely concerned in Germany compared with 80 percent in France, 77 percent in the US and 63 percent in the UK).

Asked if their organizations have experienced the loss or theft of data in the last two years, the highest positive response among IT people was in the US (82 percent), followed by France (80 percent), UK (76 percent), and Germany (64 percent).

In Germany, both employee end users (30 percent) and IT staff (45 percent) are more likely than in the other countries to believe their management would accept a decline in productivity in order to prevent security risks. The same question produced less optimism about this balance in the UK (25 percent of employees, 34 percent of IT), France (23 percent of employees, 35 percent of IT), and the US (21 percent of employees, 30 percent of IT).

Employees in all four countries say insiders who are negligent are more likely to put the organization's data at risk than external attackers or insiders acting with malicious intent.

The top three security threats that most concern IT professionals differ in each country:

France: Insiders who are negligent: 67 percent, outside attackers who compromise insider credentials: 53 percent, malicious contractors: 40 percent

UK: Insiders who are negligent: 61 percent, outside attackers who compromise insider credentials: 55 percent, malware: 47 percent

US: Insiders who are negligent: 61 percent, outside attackers who compromise insider credentials: 55 percent, malware: 47 percent

Germany: Outside attackers who compromise insider credentials: 66 percent, malware: 46 percent, malicious contractors: 41 percent (insiders who are negligent was fourth: 36 percent)

Part 3. Conclusions

While cultural and business norms vary from country to country and can affect attitudes, preparedness and resistance to insider threats and cyberattacks, the continuing increase in data loss and theft is due in large part to these factors:

- Compromises in insider accounts that are exacerbated by far wider employee and third-party access to sensitive information than is necessary
- The continued failure to monitor access and activity around email and file systems where most confidential and sensitive data moves and lives

- The lack of executive leadership in communicating the important responsibilities that every employee and contractor have in contributing to the protection of important and sensitive data
- The inadequate pace of modernization among IT and security professionals who have for years invested in protecting the perimeters of their networks and failed to adopt inside-out security technologies that protect the data itself and monitor its appropriate movement and use

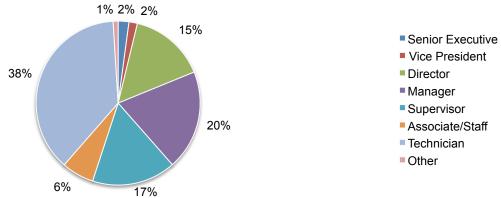

Part 4. Methods

A sampling frame composed of 49,770 IT and IT security practitioners located in the United States and Europe (United Kingdom, Germany and France) and 43,736 end users also located in the United States and Europe were selected for participation in this survey. As shown in Table 1, 1,842 IT respondents and 1,494 end user respondents completed the survey. Screening removed 186 IT respondent surveys and 123 end user surveys. The final sample was 1,656 IT respondent surveys (or a 3.3 percent response rate) and 1,371 end user respondent surveys (or a 3.1 percent response rate).

| Table 1. Sample response | IT | End user |
|------------------------------|--------|----------|
| Total sampling frame | 49,770 | 43,736 |
| Total returns | 1,842 | 1,494 |
| Rejected or screened surveys | 186 | 123 |
| Final sample | 1,656 | 1,371 |
| Response rate | 3.3% | 3.1% |

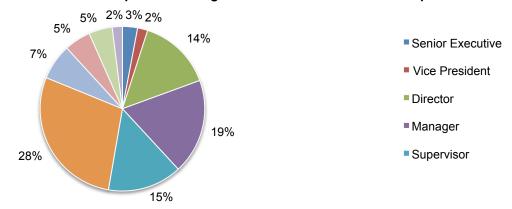

Pie chart 1 reports the current position or organization level of IT respondents. More than half (55 percent) of IT respondents reported their current position is at or above the supervisory level.

Pie Chart 1. Current position or organizational level of IT respondent

Pie chart 2 reports the current position or organization level of end user respondents. Fifty-three percent of end user respondents reported their current position is at or above the supervisory level.

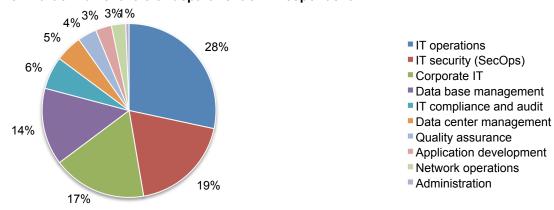

Pie Chart 2. Current position or organizational level of end user respondent

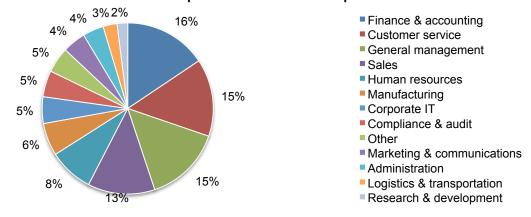

Pie chart 3 reveals the current department or function that best defines the role of the IT respondent. Twenty-eight percent indicated IT operations, 19 percent reported IT security and 17 percent identified corporate IT as their current role.

Pie Chart 3. Current role or department of IT respondent

Pie chart 4 reveals the current department or function that best defines the role of the end user respondent. Sixteen percent indicated finance and accounting, 15 percent reported customer service and another 15 percent identified general management as their current role.

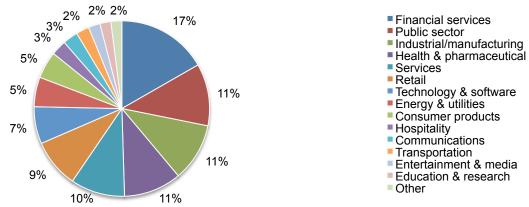

Pie Chart 4. Current role or department of end user respondent

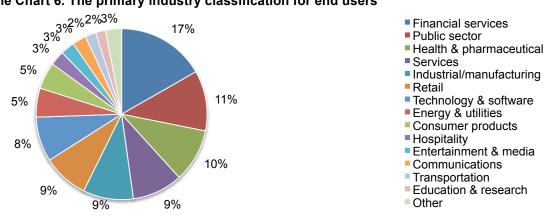

Pie Chart 5 reports the primary industry classification for the IT respondents' organizations. This chart identifies financial services (17 percent of respondents) as the largest segment, followed by public sector (11 percent) and health and industrial/manufacturing (11 percent).

Pie Chart 5. The primary industry classification for the IT respondent

Pie Chart 6 reports the primary industry classification for the end user respondents' organizations. This chart identifies financial services (17 percent) as the largest segment, followed by public sector (11 percent) and health and pharmaceutical (10 percent).

Pie Chart 6. The primary industry classification for end users

According to Table 2, 76 percent of the IT respondents and end user respondents are from organizations with a global headcount of more than 1,000 employees.

| Table 2. The worldwide headcount of the organization | IT | End user |
|--|------|----------|
| Fewer than 500 | 9% | 10% |
| 500 to 1,000 | 15% | 14% |
| 1,001 to 5,000 | 37% | 36% |
| 5,001 to 25,000 | 22% | 23% |
| 25,001 to 75,000 | 11% | 12% |
| More than 75,000 | 6% | 5% |
| Total | 100% | 100% |

Part 5. Caveats

There are inherent limitations to survey research that need to be carefully considered before drawing inferences from findings. The following items are specific limitations that are germane to most web-based surveys.

Non-response bias: The current findings are based on a sample of survey returns. We sent surveys to a representative sample of individuals, resulting in a large number of usable returned responses. Despite non-response tests, it is always possible that individuals who did not participate are substantially different in terms of underlying beliefs from those who completed the instrument.

Sampling frame bias: The accuracy is based on contact information and the degree to which the list is representative of individuals who are IT or IT security practitioners and end users located in various organizations in the United States and Europe (United Kingdom, Germany and France). We also acknowledge that the results may be biased by external events such as media coverage. We also acknowledge bias caused by compensating subjects to complete this research within a specified time period.

Self-reported results: The quality of survey research is based on the integrity of confidential responses received from subjects. While certain checks and balances can be incorporated into the survey process, there is always the possibility that a subject did not provide accurate responses.

Appendix: Detailed Survey Results

The following tables provide the frequency or percentage frequency of responses to all survey questions contained in this study. All survey responses were captured in May 2016.

IT and IT security respondents by geography

Ponemon Institute

Advancing Responsible Information Management

Ponemon Institute is dedicated to independent research and education that advances responsible information and privacy management practices within business and government. Our mission is to conduct high quality, empirical studies on critical issues affecting the management and security of sensitive information about people and organizations.

As a member of the **Council of American Survey Research Organizations (CASRO)**, we uphold strict data confidentiality, privacy and ethical research standards. We do not collect any personally identifiable information from individuals (or company identifiable information in our business research). Furthermore, we have strict quality standards to ensure that subjects are not asked extraneous, irrelevant or improper questions.
